

Does intramammary treatment of clinical mastitis quarters with ceftiofur causes its milk residues from adjacent untreated quarters?

André Luis Mendes Azevedo Carvalho, José da Páscoa Nascimento Neto, Túlio Bastos Tomaz Carvalho, Hélio Rezende Lima Neto, Rafael Morgado Victali and Luthesco Haddad Lima Chalfun

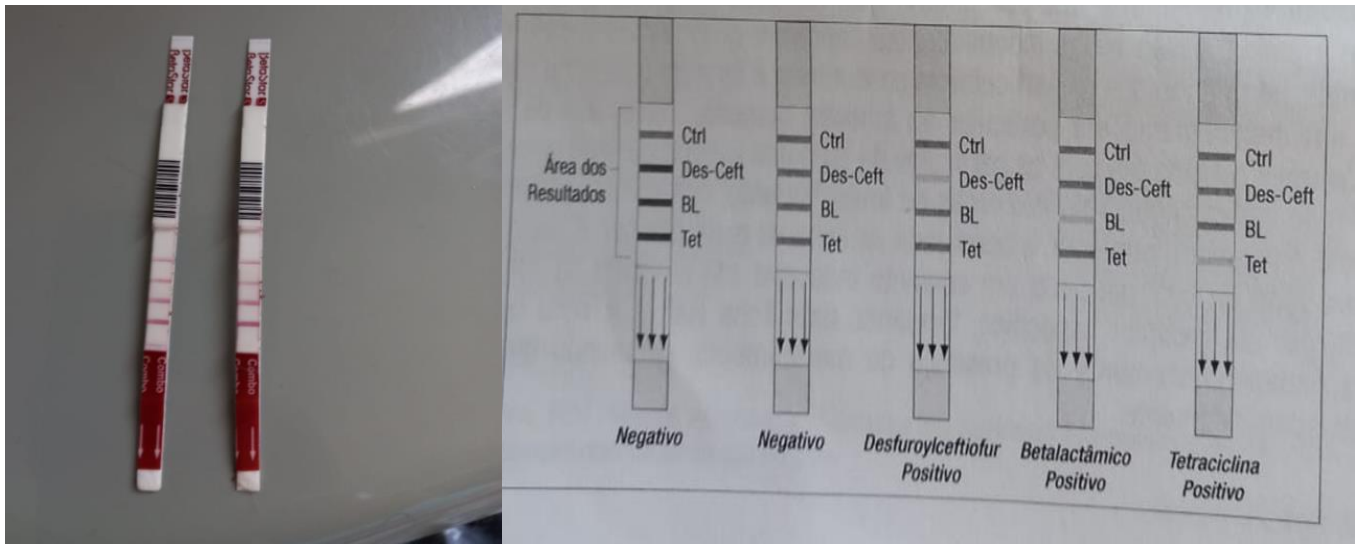

SUPPLEMENTARY FILE

Supplementary Figure S1:

Figure S1: Equipment used in the test to determine the presence of ceftiofur residues.

Figure 2:

Supplementary Figure S2: The left image indicates test strips with a negative result for antibiotic residues. The right image represents the standard reader for the visual evaluation of the strips.

Supplementary Table S1

Table 1: Number of cows and udder quarters evaluated

Cows	Udder quarters		
	Total	Clinical mastitis	Untreated healthy
49	196	53	143

Table S1: Total Number of animals and udder quarters evaluated is this research.

Supplementary Table S2

Table 2: Number of cows with more than one quarter treated for clinical mastitis

Cows	Udder Quarters		
	Total	Clinical mastitis	Untreated healthy
4	16	8	8

Table S2: Number of animals that had more than one udder quarter treated for mastitis.
