

Description of the supplementary material for *Do atmospheric rivers trigger tabular iceberg calving?*

Supplementary Table S1 provides the tabular iceberg catalog from the study. It contains label and size information for each of the icebergs, as well as the relevant USNIC report. Estimated calving dates and their uncertainties are included as well.

Supplementary Table S2 provides the latitude and longitude for each ERA5 grid point corresponding to the ice shelves associated with iceberg calving events. The grid points are those contained in the bounds of each ice shelf.
