function [theta,err,F,Ohat,H]=MWLE(S,theta0,fun,pr,bd,thrs,btol,maxiter,varargin)

% Maximum Wishart Likelihood
% Code last updated Dec 2013.

% Electronic Supplementary Material to
% QUANTIFYING ADVENTITIOUS ERROR IN A COVARIANCE STRUCTURE AS A RANDOM EFFECT
% Psychometrika, 80(3), 619-624
% by Hao Wu (Boston College, hao.wu.5@bc.edu) and Michael W. Browne (The Ohio State University)

%%%%%%%% List of Input Arguments %%%%%%%%%%

% S is the sample covariance matrix.
% theta0 is the initial value of structure parameters in the model
% fun is a function handle of the Covariance structure ...
% of the form [O,err,R,dOdx,iRdOdx]=fun(theta,...)
% input and output arguments are
% theta: a row vector of parameters
% O: the covariance structure
% [R,err]=chol(O);
% dOdx: the derivative of O, a p^2 by q matrix
% iRdOdx=(R'\otimes R')\dOdx.
% pr prints iteration details:
% 0: none;
% 1: only F, Res.Cos, cond.#.H, NPB and NEC;
% 2: only parameter values;
% 3: both
% bd is a matrix of length(theta) by 2,
% giving boundary conditions for parameters
% thrs is the stopping threshold
% btol is the boundary threshold matrix.
% It can be input as a scalar, a column vector or a 2-columned matrix.
% maxiter is the maximum iterations allowed.
% varargin passes arguments to fun, the function handle.

%%%%%%%% List of Output Arguments %%%%%%%%%%

% theta is the parameter estimate

```

% err>0 means nonconvergence
% Ohat is the implied covariance matrix
% F is the discrepancy function value
% H is the Fisher information matrix

%%%%%%%% List of Screen Outputs %%%%%%%%%%
% #: iteration number
% F: discrepancy function value
% Res.Cos: residual cosine
% cond.#.H: conditional number of Hessian (unconstrained parameters)
% NPB: number of parameters on boundary
% NEC: number of effective constraints
% parameters: parameter values
