

Information regarding data used in Weinhardt et al. (2012):
An Item Response Theory and Factor Analytic Examination of Two Prominent Maximizing
Tendency Scales

Weinhardt et al. (2012) Raw Data: SPSS Raw Data File

This file contains the complete data set with all the items labeled as well as the aggregated variables that were used. This data set was used to conduct the IRT analysis and to conduct the correlational analysis.

MTS_CFA (Weinhardt et al. 2012):

This text document contains the data that was used to conduct the confirmatory factor analysis of the maximizing tendency scale. This analysis was performed using LISERAL v8.8

MS_CFA (Weinhardt et al. 2012):

This text document contains the data that was used to conduct the confirmatory factor analysis of the maximizing scale. This analysis was performed using LISERAL v8.8

MTS_EFA (Weinhardt et al. 2012):

This text document contains the data that was used to conduct the exploratory factor analysis of the maximizing tendency scale. This analysis was performed using LISERAL v8.8

MS_EFA (Weinhardt et al. 2012):

This text document contains the data that was used to conduct the exploratory factor analysis of the maximizing scale. This analysis was performed using LISERAL v8.8
