interview 5	Hungarian minority politician	Bratislava	3 November, 2021
interview 6	Hungarian minority politician	Bratislava	3 November, 2021

Table A1: List of interviews

A.2 Measures of Democracy

Figure A1 compares the V-Dem liberal democracy score with the scores of Polity and Freedom House civil liberties and political rights. It demonstrates the great nuance of the V-Dem measure, compared to the relative crudeness of Polity and Freedom House. While the Polity measure is invariant between, the Freedom House measure reflects democratic change only in a crude step-wise manner. V-Dem provides a much more fine grained picture of liberal democratic development in annual increments which makes it better suited for the study of vote share changes and government participation.

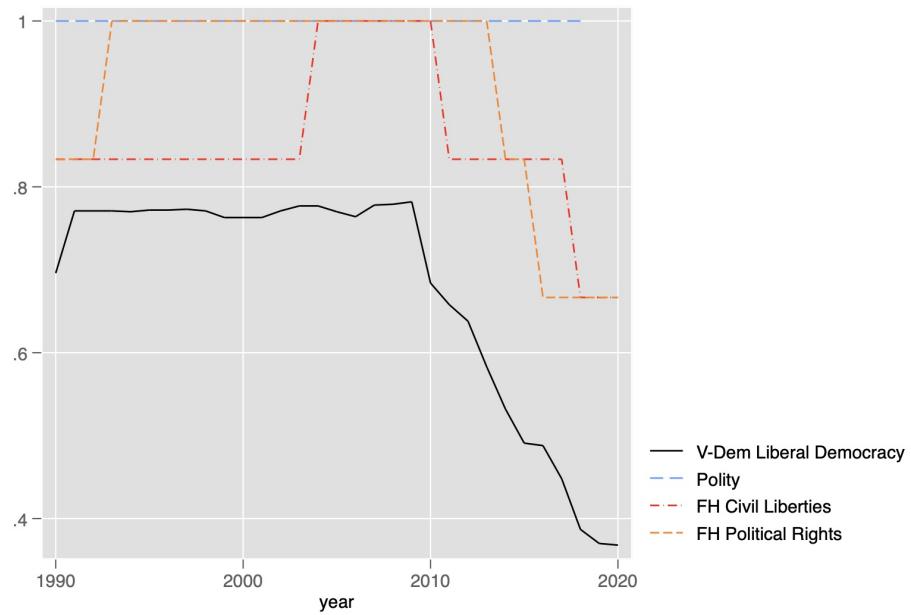

Figure A1: Comparing V-Dem, Polity and Freedom House measures in Hungary

All measures have been rescaled to range from 0 to 1. Freedom House measures have been reversed to capture higher democracy as the value increases.

A.3 Factor analysis of V-Dem measures of democracy

Table A2 below reports the results of a principal factor analysis of the seven key V-Dem democracy measures: polyarchy, liberal democracy, participatory democracy, deliberative democracy, egalitarian democracy, API and MPI. The analysis yields one clear factor. This factor correlates with the measure of liberal democracy in the sample at 0.9926.

Factor	Eigenvalue	Difference	Proportion	Cumulative
Factor1	6.57152	6.45194	0.9798	0.9798
Factor2	0.11959	0.09872	0.0178	0.9976
Factor3	0.02087	0.00767	0.0031	1.0007
Factor4	0.01320	0.01322	0.0020	1.0027
Factor5	-0.00002	0.00304	-0.0000	1.0027
Factor6	-0.00306	0.01208	-0.0005	1.0023
Factor7	-0.01514	.	-0.0023	1.0000

Table A2: Factor analysis of V-Dem measures of democracy in eastern Europe

A.4 Party Classification

The article classifies political parties into four groups: illiberal, constitutional liberals, ethnic minority parties, and others. Illiberal parties seek to oppose liberalism as a constitutional principle, they undermine political pluralism by advocating majority rule based on flexible often ethnocentric conceptions of ‘the people’ as the ultimate source of political legitimacy. This broader category includes contemporary ‘ethnopoliticians,’ as well as other anti-pluralist forces, such as the radical right or unreformed communists. The opposite of illiberals are constitutional liberals who actively seek political pluralism that accords political rights and civil liberties to all individuals, and seeks institutional checks and balances as well as the rule of law in order to constrain majority rule. Ethnic minority parties are parties that seek to represent specific or diverse ethnic minorities. These parties receive a majority of their vote from individuals who identify as members of an ethnic minority. Moderate parties that are neither illiberal, nor explicit constitutional liberals, and that do not represent ethnic minorities fall into a residual category.

Illiberal and constitutionally liberal political parties are identified with the aid of V-Party data that include a measure of ‘anti-pluralism’, which measures the extent to which a “party shows a lacking commitment to democratic norms”, available for all studied countries for the period since 1990 (V-Party data). Given the relatively small number of parties per country and election, assigning a certain percentile of the most pluralist and anti-pluralist parties to the constitutionally liberal and illiberal category respectively, leads to problematic inclusion or exclusion of parties. The parties are thus coded as follows:

country	party	full name	anti-pluralism	differerce from median
Bulgaria	ATA	Ataka	0.936	0.803
Bulgaria	BSP	Balgarska sotsialisticheska partiya (year<=1997)	0.643	0.492

Table A5: Ethnic parties

Figure A2 provides a summary of anti-pluralism scores of the different party types.

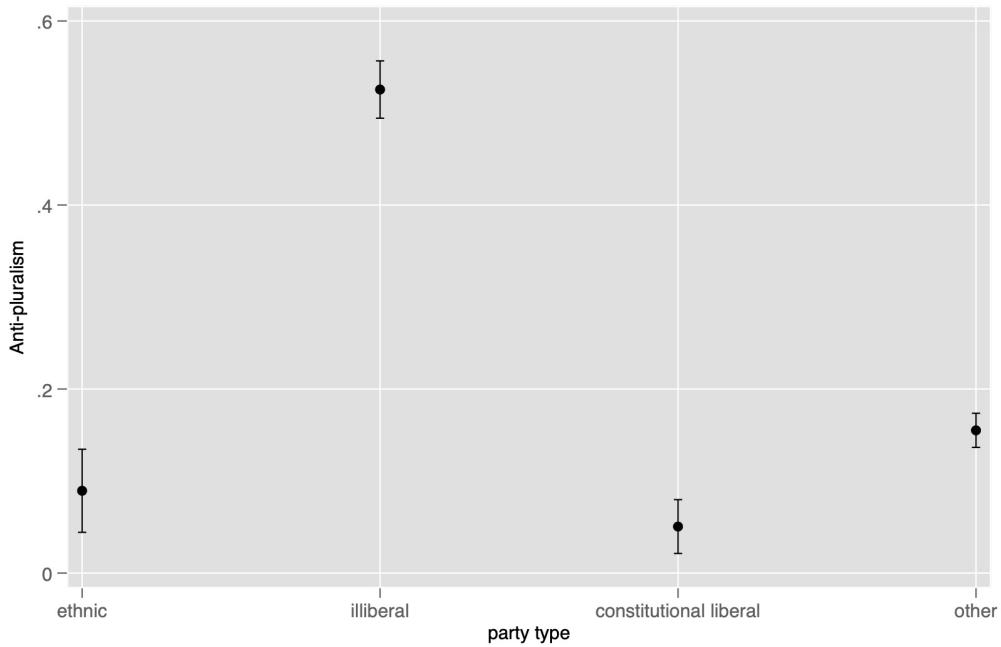

Figure A2: Party types and anti-pluralism

Note: Mean placements with 95% confidence intervals. V-Party data

A.5 Alternative party classification and robustness check

Alternatively, illiberal and liberal political parties can be specified according to more traditional party families, as nationalist parties, and social liberal parties. Nationalist parties include the radical right and nationalist illiberal parties: the Bulgarian BSP, Czech ANO, Romanian PSD, and Slovak HZDS and Smer after 2012, as identified by the literature (Vachudova 2005, Mesežníkov and Gyarfášová 2018, Vachudova 2020). Ethnic parties are the same as in table A5, and the following parties are coded as illiberal and social liberal in this classification:

country	party	full name
Bulgaria	ATA	Ataka
Bulgaria	BSP	Balgarska sotsialisticheska partiya (year<=1997)
Bulgaria	NFSB	Natsionalen Front za Spasenie na Bulgariya
Bulgaria	VMRO	Balgarsko Natsionalno Dvizhenie
Bulgaria	Volya	Dvizhenie Volya
Croatia	HSP	Hrvatska stranka prava
Czech Republic	ANO	Akce nespokojenyh obcanu
Czech Republic	DSSS	Delnicka strana socialni spravedlnosti
Czech Republic	SPD	Svoboda a prima demokracie Tomio Okamura
Czech Republic	SPR-RSC	Sdruzeni pro republiku-Republikanska strana Ceskoslovenska
Czech Republic	UPD	Usvit prime demokracie
Estonia	EKO	Eesti Kodanik

Table A8: Results with alternative party classification

A.6 Additional party classification robustness tests

To additionally test the robustness of the results to the illiberal and constitutional liberal party classifications, this section carries out additional analyses. It takes the union of both classifications discussed above, including all parties that could be considered as illiberal or as liberals. Then it carries out the analyses reported in the text of the article 1000 times, each time randomly removing 3% of the illiberal and 3% of the constitutional liberal cases. This amounts to randomly removing about 5 observations from each category in each iteration. Figure A3 plots the distributions of key β coefficients from these 1000 analyses.

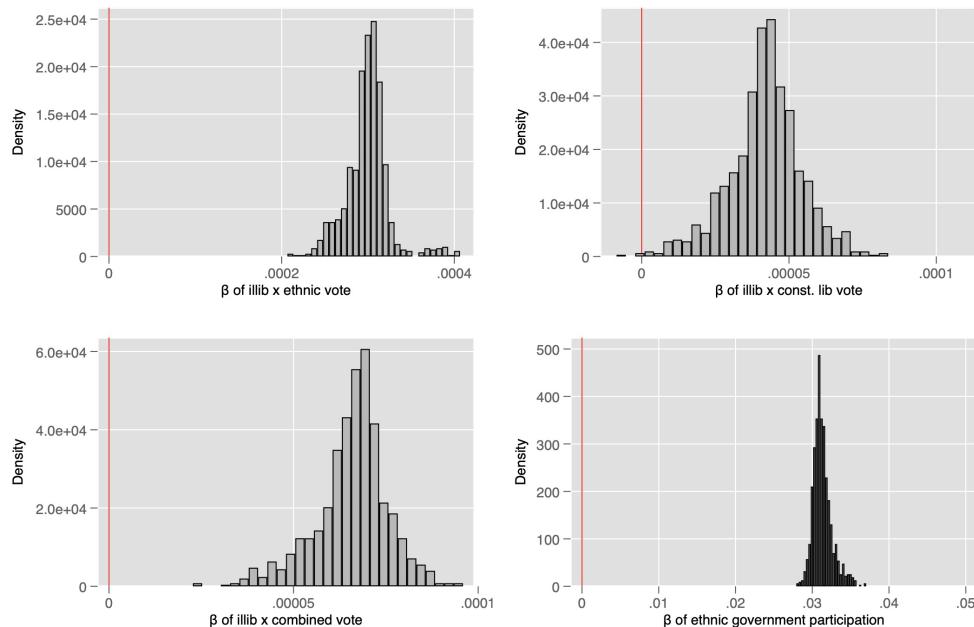

Figure A3: Robustness of key β coefficients to various specification of ethnopolulist and constitutional liberal party categories

Each panel of figure A3 shows the distribution of the key β coefficients testing the hypotheses of the analyses – the interaction between illiberal and

ethnic party vote share (H2) in the first panel; the interaction between illiberal and constitutionally liberal party vote share (H3) in the second panel; the interaction between illiberal and combined ethnic and constitutional liberal vote share (H4) in the third panel; and ethnic party government participation (H5) in the fourth panel – across the 1000 estimations with randomly sampled subsets of illiberal and constitutional liberal parties. All coefficients are on the correct side of 0, with the exception of a small share of the β s capturing the moderating effect of constitutionally liberal parties (second panel). This underscores the limited moderating influence of constitutional liberals apparent in the core model and discussed in the paper. Overall, these analyses demonstrate significant robustness of the results to diverse classifications of illiberal and constitutionally liberal parties.

A.7 Robustness checks time-series cross-section

This section reanalyzes the time-series cross-section analysis presented in table 1 in the paper. Model 1 uses multi-level estimation with random country-level intercepts. Model 2 uses the common democracy principal factor, summarized in table A2 above, as the dependent variable. Model 3 includes a lagged dependent variable with country fixed effects. Model 4 includes country and year fixed effects. Model 5 includes bootstrap standard errors.

A.9 Human subject data collection and ethical issues

The research for this paper has been reviewed by the Research Ethics Committee and legal department of my university. All procedures regarding the collection and usage of data involving human subjects and their subsequent use in analyses has been unanimously approved by the committee. The committee did not identify any particular ethical threats to human subjects posed by this research.

This paper relies on public quantitative dataset, and on interviews with academic, civil servant and political actors. All interviewees have been informed about the general aims of the research project, as well as of their rights to data protection. All interviewees have given their informed consent to the interview and its subsequent usage, in line with the research protocol reviewed by the Research Ethics Committee.
