Results are presented as p-values from analysis of total and incremental area under the curve (AUC and iAUC) in a linear mixed model for repeated measures. When significant interaction was found between group and meal, p-values are presented stratified by group and meal. P_{meal}, p-value SFA vs PUFA meal; p_{group}, p-value FH vs controls; SFA, saturated fatty acid; PUFA, polyunsaturated fatty acid; FH, familial hypercholesterolemia; C, controls; VLDL, very low-density lipoprotein; IDL, intermediate-density lipoprotein; LDL, low-density lipoprotein; HDL, high-density lipoprotein; *FH>controls; **controls>FH; †SFA>PUFA; ‡PUFA>SFA. FH n=13; controls n=14.

Supplementary Table 3. Correlations between circulating proprotein convertase subtilisin/kexin type 9 and lipids.

	PCSK9 AUC				PCSK9 iAUC
