Alcohol consumption habit	-0.011	0.282			-0.014	0.322			-0.009	0.585		
Multiple R = 0.192, F = 51.007, p < 0.0001				Multiple R = 0.196, F = 33.721, p < 0.0001				Multiple R = 0.207, F = 32.702, p < 0.0001				

Abbreviations are as in Table 1. r = correlation coefficient; β = standard partial regression coefficient

Since the waist circumference and body mass index are well known to be highly correlated with each other, waist circumference, which is a better indicator of visceral obesity than the body mass index and also serves as an indicator of energy intake, was entered into the univariate linear regression model as an independent variable.
