

Fig. S1 The ranges of obtained values for male body (**a-h**) and aedeagus (**i-n**) characters shown in Fig. 2 and Tables 4, 6. Data are arranged according to species and country of origin (France, Slovenia). Box and whisker plots show the median (black line), the 25-75% interquartile range (boxes), the lowest and the highest data points still within 1.5 times interquartile range (whiskers) and outliers (circles). For measured parameters a-h, Y axis represents mm, and for parameters i-n μm .
