¹ Means within columns and locations followed by the same letters do not differ significantly at $P \leq 0.05$, Tukey's honest significant difference test.

² In 2016 the Codette 2 site was near Codette Lake.

Supplementary Table 3. Mean flea beetle damage (% defoliation averaged over four youngest tissues) per plot by insecticide seed treatment, year and seeding date in canola seeded at four different locations in north eastern Saskatchewan. Early and Late seeding dates correspond to Table 1 of paper. Shaded cells – economic threshold exceeded.
