

Table S3. Geothermometry calculations for amphibole-plagioclase pairs from greenschist samples PKS11 and PKS12 from the Theodorii Greenschist south of the Dikti Mountains using the Excel-based calculation grid of Hora et al. (2013) for the edenite-tremolite geothermometer (hornblende-plagioclase assemblages with quartz) of Holland & Blundy (1994). Calculation inputs for plagioclase and amphiboles are from the representative chemical analyses in Tables S1 and S2 in the electronic supplementary material. The pressures indicated and used for grid calculations were calculated for amphiboles using the method of Ridolfi & Renzulli (2012). Values in blue fields are the calculated temperatures in °C resulting from the plagioclase and amphibole inputs in the respective column and row. Only valid equilibrium pairs are shown.
