

Supplement 2

with A. Nieuwhof & P.C. Vos: New data from terp excavations on sea-level index points and salt marsh sedimentation rates in the eastern part of the Dutch Wadden Sea

in: Netherlands Journal of Geosciences

Detail of excavation drawing 1933-088

The drawing shows the lower part of a terp profile with a length of 23 m. The terp was ca 4 m high at this location. The descriptions of natural layers are translated.

Lower left: part of a level drawing on the same drawing sheet.
