**Supplementary Table S2. Antioxidant enzymes in bovine hepatocytes.**

Hepatocytes were treated with 0, 0.6, 2.4 and 4.8 *mM* AcAc, respectively. The intracellular levels of the antioxidant enzymes GSH-Px, SOD and CAT were measured using commercial kits. The data are shown as the mean ± SEM. a, b and c, the same letter indicates no significant difference ( $P>0.05$ ), different letters mean a significant difference ( $P<0.05$ ).
