

CD49⁺ mammary epithelial cells decrease in milk from dairy cows stressed by overstocking during the dry period

Mario Baratta, Silvia Miretti, Paolo Accornero, Giovanna Galeati, Andrea Formigoni, Gianfranco Gabai, Daniele Nucera, Eugenio Martignani

Supplementary data

Supplementary figure S1

Plasma concentrations of Dehydroepiandrosterone (DHEA) (pmol/ml) (left) and plasma cortisol (ng/ml) (right) in control (CTR) and overstocked condition (OS) groups during the last month before and the first two months after calving. The asterisk indicates a statistically significant difference between the CTR and OS ($P < 0.05$) group. Values are mean \pm DS.
