

## **A two-step immunomagnetic separation of somatic cell subpopulations for a gene expression profile study in bovine milk**

Sara Divari, Laura Starvaggi Cucuzza, Fulvio Riondato, Paola Pregel, Paola Sacchi, Roberto Rasero, Bartolomeo Biolatti and Francesca Tiziana Cannizzo

### **SUPPLEMENTARY FILE**

**Supplementary Figure S1:** Cytospins of cell suspension before immunomagnetic separation (A), of CD45+ CD11b- population (B) and of CD45- CD11b- population (C). A mixed population made of PMNL, MC, LC and EP is present in A, while mainly LC and EP are recognized in B and C, respectively. (May-Grunwald Giemsa staining, x 600 magnification; bar: 50µm).
