

Prospecting genomic regions associated with milk production traits in Egyptian buffalo

Hamdy Abdel-Shafy, Mohamed A.A. Awad, Hussein El-Regalaty, Salah El-Din El-Assal and Samy Abou-Bakr

Supplementary table 1- Editing steps for daily milk records in the buffalo cows

Editing options	Deleted		Remaining	
	Records	Animals	Records	Animals
Initial numbers	-----	-----	177,995	1,992
Known calving dates	178	15	177,817	1,977
Lactation number between 1 and 13	1,739	3	176,078	1,974
DIM between 5 and 290	10,384	18	165,694	1,956
At least 3 months of lactation	4,215	286	161,479	1,670

DIM: days in milk.

Supplementary table 2- Editing process for SNPs used for GWAS in the Egyptian buffalo

Quality control method	Deleted SNPs	Remaining SNPs
Original SNPs	-----	123,040
Duplicate SNP positions	27,913	95,127
Un-positioned SNPs	17,845	77,282
SNPs with low call rate <85%	7,045	70,237
SNPs deviated from HWE	823	69,414
SNPs with MAF<0.01	5,245	64,169
LD pruning ($r^2>0.5$)	19,184	44,985

MAF: minor allele frequency, HWE: Hardy-Weinberg equilibrium, LD: linkage disequilibrium

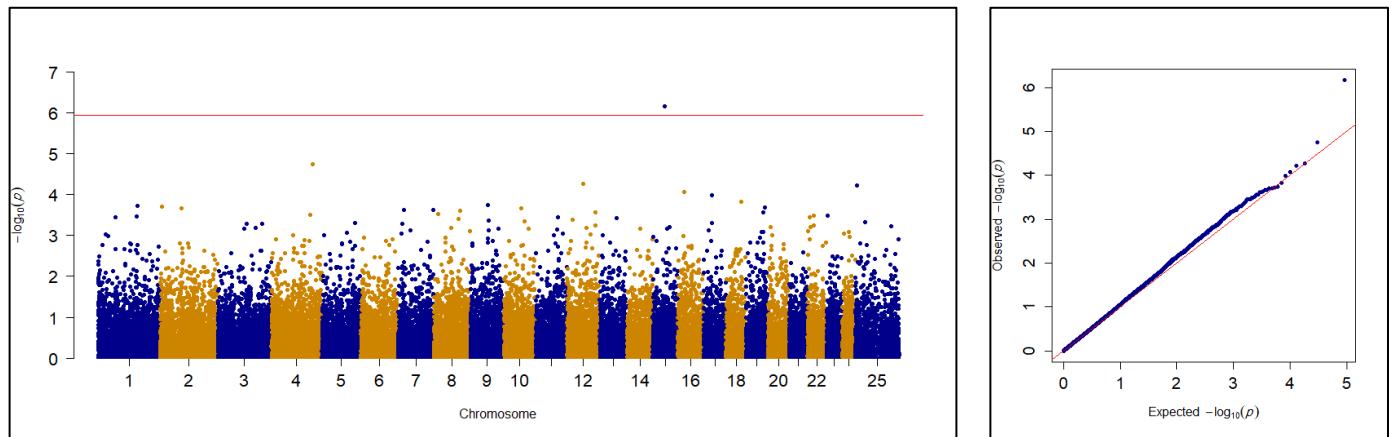

Supplementary table 3- Suggestive SNPs and candidate genes associated with milk production traits in Egyptian buffalo

Chr: chromosome, MA: minor allele, MAF: minor allele frequency, β : change per minor allele, DMY: daily milk yield, DFY: daily fat yield, DPY: daily protein yield, DLY: daily lactose yield. Suggestive SNPs are close to significant threshold line based of Bonferroni correction. In the distance: "+" for upstream and "-" for downstream. Positions are given according to the latest reference assembly of buffalo genome (UOA_WB_1: GCA_003121395.1).

Supplementary figure 1 – Manhattan and Q-Q plots of genome-wide association for a) daily milk yield, b) fat%, c) fat yield, d) protein%, and e) protein yield in Egyptian buffalo.

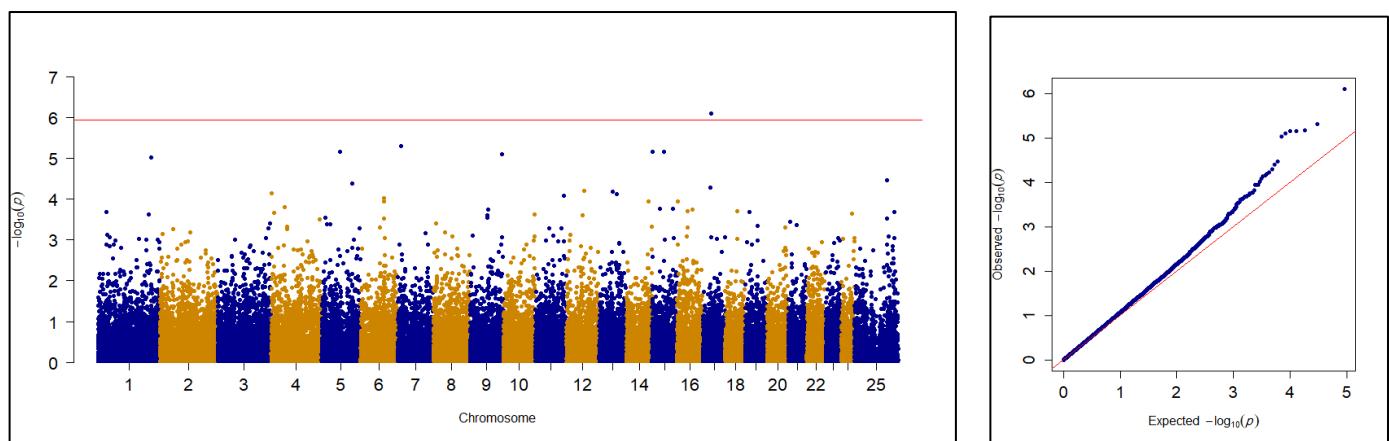

a)

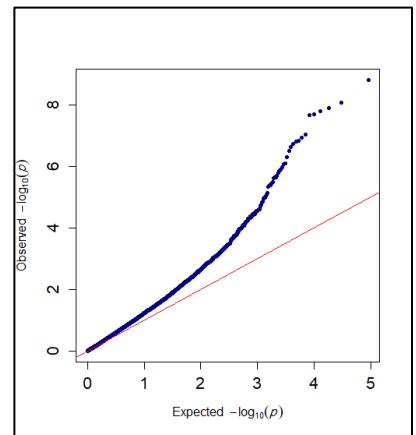

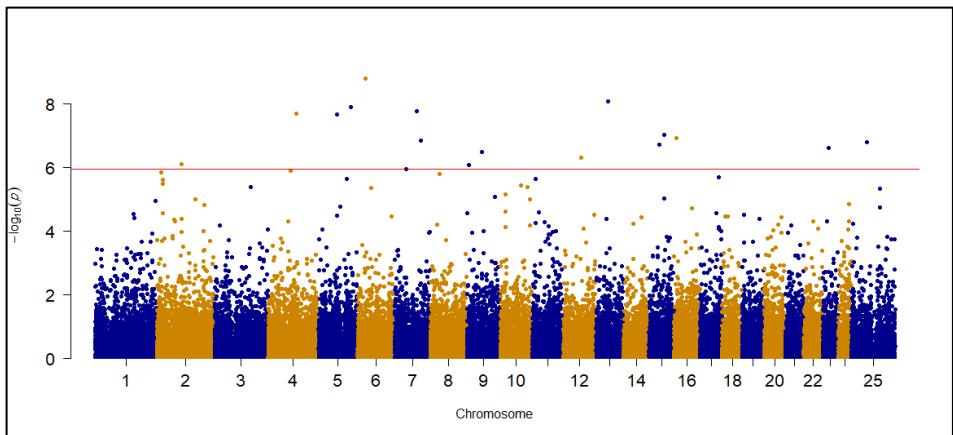

b)

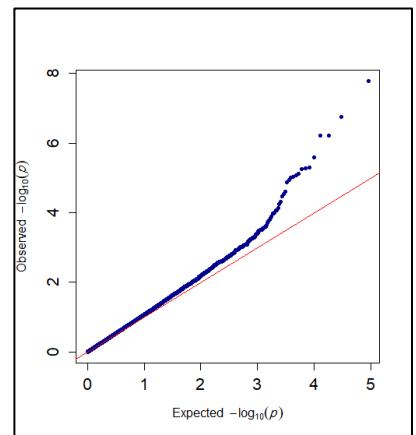

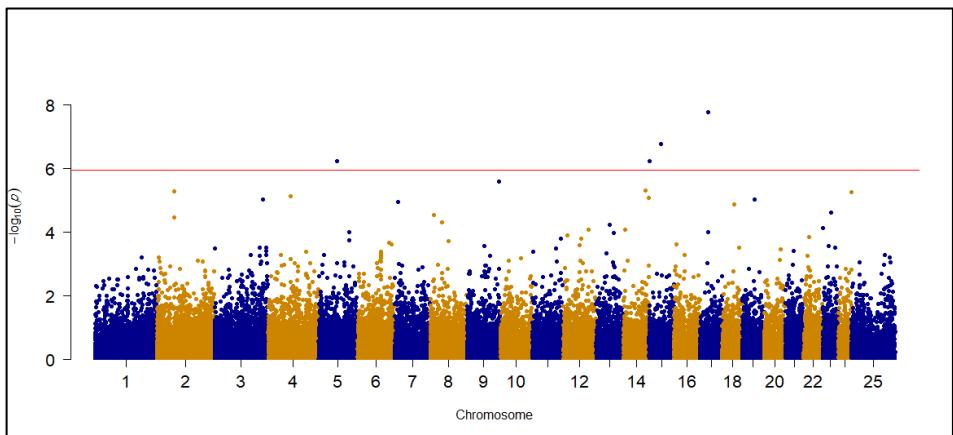

c)

d)

e)

The horizontal line indicates the whole-genome significance threshold after Bonferroni correction at $\alpha = 0.05$ ($P \leq 1.11 \times 10^{-6}$).
