Picked OTUs	4366	6408
Good's coverage (%)	91±2.7	78±8.1

### Supplementary figure 1: Diversity\_indices

Barplots of means with standard errors and individual values for Shannon, Simpson, Richness and Evenness diversity indices, computed on rumen (left column) and faecal (right column) OTU tables. Cows received Starch (high starch diet), Palmoil (rumen protected SFA from Ca-salts of palm oil), Rapeseed diet (rich in MUFA from extruded rapeseeds) or Sunflower diet (rich in PUFA from extruded sunflower seeds). Statistical analysis was performed using non-parametric Kruskal-Wallis test and pairwise comparisons - using Wilcoxon-Mann-Whitney

**Supplementary table 4a:** Bacterial abundance at order level in the rumen contents of cows fed high starch or rapeseed, palmoil or sunflower oil supplemented diets. Values are means of four observations; statistical analysis was performed to evaluate the effect of diet and lipid supplementation (starch diet compared to all lipid supplemented diets). In both cases we used the non-parametric Kruskal-Wallis test with fdr p value adjustment followed by a Dunn test when appropriate.

**Supplementary Table 5:** Bacterial abundance at order level in the faecal contents of cows fed high starch or rapeseed, palmoil or sunflower oil supplemented diets. Values are means of four observations; statistical analysis was performed to evaluate the effect of diet and lipid supplementation (starch diet compared to all lipid supplemented diets). In both cases we used the non parametric Kruskal-Walis test with fdr p value adjustement followed by a Dunn test when appropriate.

Order	Diets					P-value	
	Ca salts of palmoil	High starch	Extruded rapeseeds	Extruded sunflower seeds	SEM	Effect of Diet	Effect of lipid supplementation
