

Probing of alpha, beta, and kappa-caseins variations in the *Gangatiri* cow milk with the use of polyacrylamide gel electrophoresis and High-Resolution Accurate Mass Spectroscopy

Manish Kumar Singh, Arvind, Ramadevi Nimmanapalli and Ankita Hooda

SUPPLEMENTARY FILE

Fig. S1: Comparative demonstration of SDS-PAGE dissociation of whole caseins isolated from the two exotic cow breeds, Jersey and HF, and two indigenous breeds of cow, Sahiwal, and Gangatiri (Lanes 4-7). Lane first contains a protein ladder (Sigma Aldrich). Whole bovine caseins were fractionated into alpha, beta, and kappa casein bands.

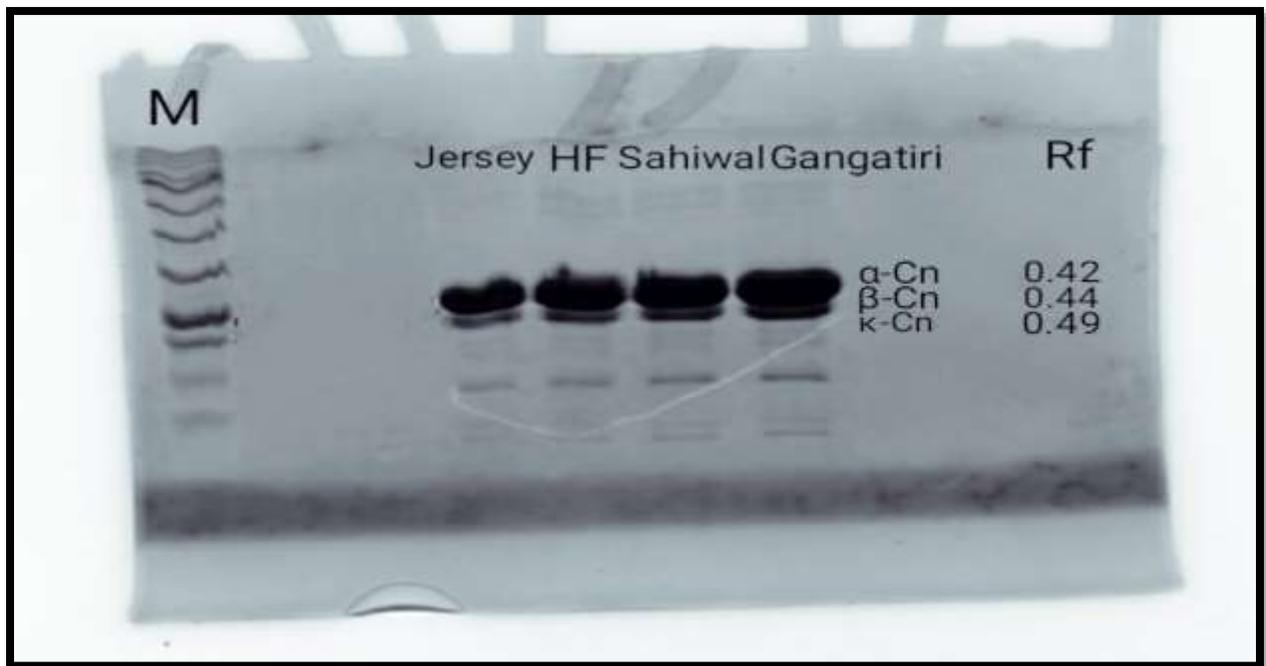

Fig. S2: The amino acid sequence of α s1-casein according to UniProt Custom reference proteome database (ID: P02662) as comparing data obtained from HRAMS analysis homologous to NCBI database depicts variant B.
