

# Combining radio-telemetry and random observations to model the habitat of Near Threatened Caucasian grouse *Tetrao mlokosiewiczi*

ALEXANDER GAVASHELISHVILI and ZURA JAVAKHISHVILI

**Appendix 1** Grouse climate model. The variables are described in Table 1.

Climatic variable	Coefficient	Minimum value	Maximum value
bio1	0	-9.4	15.5
bio2	0	6.4	14

Linear predictor	-3.999929		
normalizer			
Density	167.43025		
normalizer			
Number of background points	10,000		
Entropy	6.8677558		

**Appendix 2** Grouse disturbance model. Cost distance from urban areas on slope is calculated with the slope cell size excluded.

Disturbance variable	Coefficient	Minimum value	Maximum value
Cost distance	14.4027	0	1,151.16
Cost distance $\wedge 2$	-11.112488	0	1.33E+06
Linear predictor normalizer	4.66674		
Density normalizer	969.18		
Number of background points	10,000		
Entropy	8.098679		

**Appendix 3** Grouse land cover model. In the variable name the number corresponds to the land cover class described in Table 2. Distances are in metres.

Landcover variable	Coefficient	Minimum value	Maximum value
distance1	10.38134642	0	120,611
distance3	-6.700217129	0	113,450
distance4	-4.80008897	0	213,438
