

# Bat conservation in China: should protection of subterranean habitats be a priority?

JINHONG LUO, TINGLEI JIANG, GUANJUN LU, LEI WANG, JING WANG and JIANG FENG

TABLE S1 Bat species found roosting in caves and other subterranean habitats in China, with the site (numbers as in Table S3), source and conservation status in China (Wang & Xie, 2004) and globally (IUCN, 2010).

\*New record for China

†Endemic to China (including Taiwan)

<sup>1</sup>Numbers correspond to the provinces and municipalities in Fig. 1

<sup>2</sup>a, this survey; b, China Species Red List (Wang & Xie, 2004); c, IUCN Red List (IUCN, 2010)

<sup>3</sup>EN, Endangered; VU, Vulnerable; NT, Near Threatened; LC, Least Concern; DD, Data Deficient; NE, Not evaluated; NA, Not applicable (recorded in areas bordering other countries but insufficient information available for evaluation). Blank cells for the National Red List indicates that the species is not included in Wang & Xie (2004).

<sup>2</sup>See text for definitions of roosts as large, small and data deficient

<sup>3</sup>The main human activity recorded (Distant indicates that the roost is far from main roads and residential areas)

<sup>4</sup>Reasons why some roosts are of special conservation concern: EN, Endangered species present; VU, Vulnerable species present; Endemism, endemic species present; Richness, total number of bat species ≥6; Abundance, total number of individuals >1,000; numbers in parentheses indicate number of species

<sup>5</sup>New species record (Sun et al., 2008) but its taxonomic status is still controversial (see comments in Zhang et al. (2009))
