

α -tubulin

α -tubulin/*B. besnoiti*/DAPI

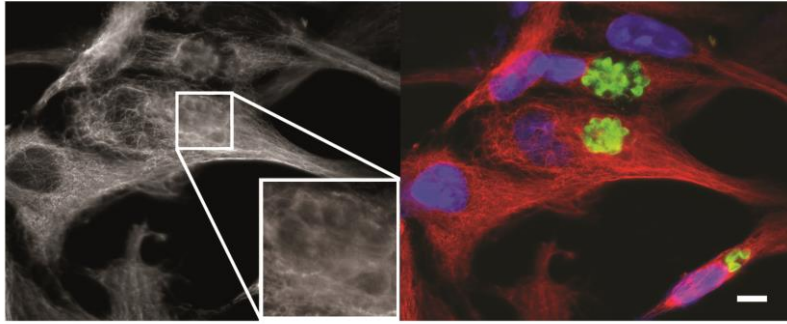

Fig. S4. Indirect immunolocalization of the host cell α -tubulin during invasion by *B. besnoiti* of TBCCD1 depleted RPE-1 cells (18h post-invasion). On the left side panel, the microtubules of an invaded host cell are shown by an antibody against α -tubulin. The zoomed area shows in detail the close interaction of microtubules with *B. besnoiti* parasitophorous vacuole. On the right side panel α -tubulin is shown in red, parasites in green (polyclonal antibody against *B. besnoiti*), and blue for DNA staining with DAPI. Scale bar=7 μ m.
