

trans synaptic signaling

positive regulation of immune process

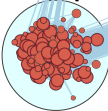

epithelium development

humoral antimicrobial organism

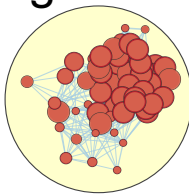

protein metabolic regulation process

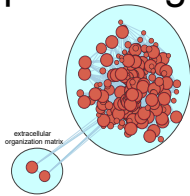

potassium channel activity

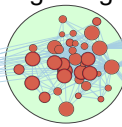

metabolic process regulation

epithelial cell response regulation

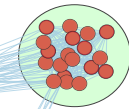

synaptic regulation signaling

transmembrane transporter activity

plasma morphogenesis differentiation

regulation synapse structure

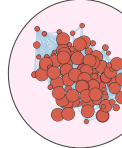

synaptic vesicle regulation

organelle localization establishment

central nervous system development

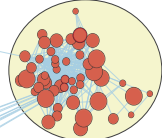

acid catabolic process

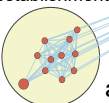

sensory organ development

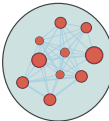

cellular regulation response

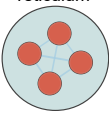

protein localization establishment

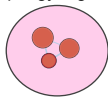

axon ensheathment

endoplasmic reticulum

autophagy regulation

myelin sheath

male germ
