

Intrusions

- B1: Intrusive memories
- B2: Nightmares
- B3: Flashbacks
- B4: Emotional cue reactivity
- B5: Physiological cue reactivity

Avoidance

- C1: Avoidance of thoughts
- C2: Avoidance of reminders

Alterations in cognition & mood

- D1: Trauma-related amnesia
- D2: Negative beliefs
- D3: Blame of self or others
- D4: Negative trauma-related emotions
- D5: Loss of interest
- D6: Detachment
- D7: Restricted affect

Alterations in arousal & reactivity

- E1: Irritability/anger
- E2: Self-destructive/reckless behavior
- E3: Hypervigilance
- E4: Exaggerated startle response
- E5: Difficulty concentrating
- E6: Sleep disturbance

Supplemental Figure S2. Full Between-Subjects Slopes Network. All estimated edges are depicted. Circles around nodes reflect symptom predictability and can be interpreted as variance in the symptom that can be accounted for by the rest of the network. Node location has been averaged across the person-mean and slope networks.
