Figure S1. The relationship between boma construction category and the number of cattle owned by households. (Adequate - bomas likely to hinder easy access of predators; Poor - bomas unlikely to hinder easy access of predators). Households with adequate bomas owned 45.1 ± 3.7, CL 37.8 - 52.5 cattle, those with poor bomas owned 30.4 ± 3.4, CL. 23.7 - 37.2 cattle. Boxes describe the interquartile range around the median; whiskers cover observed values within 1.5 times the value of the interquartile range; stars indicate observed values between 1.5 and 3.0 times the value of the interquartile range; and circles indicate values beyond this range.
