

Supplementary figure

Supplementary Figure. Receiver operating characteristic curve of cycle threshold value (Ct) for persistent infectivity on Day 10 of COVID-19 infection among 19 elderly individuals. The area under the curve (AUC) for the use of Ct value to discriminate between patients with and without persistent infectivity on Day 10 of COVID-19 infection was 0.93 (95% confidence interval, 0.79 to 1.00).
