

## Supplementary materials

### 1. Interactions plots

2. The list of the top genes for gene-based G×E interactions (adjusted Brown's method) for five parenting dimensions.

#### 1.

Interaction effects of the most significant SNPs with harsh parental control in predicting social anxiety in adolescents (A) rs474088, *SLC1A1* gene; (B) rs1468951, *GSTZ1* gene; (C) rs12621307, *CALCRL* gene.

2.

The list of the top genes for gene-based G×E interactions (adjusted Brown’s method) for five parenting dimensions (*harsh punitive control, support, proactive control, psychological control and punitive control*) and Manhattan plots for gene-based G×E interactions (each line represents a gene).
