

Supplemental online material. Hybrid model examining the association between depressive symptoms, disordered eating and attachment to the mother and to the father among boys and girls. Standardized coefficients are depicted. Results for attachment to the mother are named first, results for attachment to the father are named second. $\chi^2 = 30.55$, $df = 31$, $p = .49$; RMSEA = .000, 90%CI:.000-.024, CFI = 1.000, TLI = 1.000. T1/T2/T3/T4 = Time 1/Time 2/Time 3/Time 4. *** $p < .001$, ** $p < .01$, * $p < .05$.
