

Figure S2 A comparison of blood cortisol variation during housing in the vector-protected barn (a) without and (b) with ventilation adjustment. Blood cortisol values were measured at 6:00 h, 10:00 h, 14:00 h, and 18:00 h. The cortisol levels at given time-points were compared to the value at 6:00 h (control).

** $P < 0.01$, and *** $P < 0.001$, significant difference from the values at 6.00 h.
