

Supplement 3: Archaeofaunal Data

Garvey, Silva, Roa, and Charó

"Prehistoric Human Occupation of Andean Forests: Evidence from Alero Largo, Aysén, Chilean Patagonia"

Table SI-3: Faunal data by chronological block (1-3) and stratum (A-H). Each cell contains count and percentage* (in parentheses). Taxon, NISP of: ART = Artiodactyla; ROD = Rodentia; ZAE = *Zaedyus pichiy*; OTH = other taxon; UNK = unidentified; Part: AXI = element from axial skeleton; APP = element from appendicular skeleton; PLAC = dermal plate (*Zaedyus pichiy*); UNK = unidentified; Age: UF = unfused element; FND = partially-fused element; FUS = fully fused element; UNK = unable to determine; Weathering, after Behrensmeyer (1978): W1 = with parallel fissures; W2 = peeling and exfoliation of the outermost tissue layers—cracks with angular cross-sectional edges affecting the most superficial part of the bone; W3 = destruction of compact tissue to a depth of 1-1.5mm, cracks with rounded edges; Alteration: THERM = thermal alteration (restricted at RI-6W to calcined, carbonized, and lightly burned); MARK = evidence of contact with tools (see main text for specifics and stratigraphic distributions); TOOL = specimen is a bone modified into a tool. *Percentages: N for each block = percent of assemblage total; N for each stratum = percent of block total; taxon = percent of block or stratum total, accordingly; each taxon (e.g., Artiodactyla) = taxon NISP for the specified block / stratum; taxon UNK = percent of block / stratum total that could not be taxonomically identified; part = percent of block / stratum total that could be identified to element; each element category (e.g., axial) = percent of all specimens identifiable to that element category for the specified block / stratum; part UNK = percent of block / stratum total that could not be identified to element; age = percent of block / stratum total that could be age assessed; each age category (e.g., unfused element) = percent of all specimens of that age category per block / stratum; weathering = percent of block or stratum total showing weathering; each weathering stage (e.g., W1) = percent of all weathered specimens falling within the specified weathering category within the block / stratum; alteration = percent of block / stratum total showing signs of alteration; type of alteration (thermal / marking) = percent of all specimens showing alteration within a block / stratum that show the specified type of alteration; tool = percent of block / stratum that is a bone modified into a tool.
