

Diagnostic Errors in Pediatric Cardiac Intensive Care

THANK YOU FOR YOUR PARTICIPATION!

Please read each question carefully and provide the best response(s). Please try to answer all questions and click 'Done' when you have finished the survey. Remember, your responses are CONFIDENTIAL.

Survey completion will take approximately 30 minutes.

* 1. Please indicate your provider classification:

- Registered Nurse
- Clinical Fellow
- CVICU Hospitalist
- CVICU Nurse Practitioner (NP)
- Physician Assistant (PA)
- Faculty/Attending Cardiac Intensivist
- Other (cardiology consultant, ICU consultant, etc)

* 2. What is your gender?

- Male
- Female

* 3. How long have you been employed in your current position?

- Less than 1 year
- 1-5 years
- 6-10 years
- Greater than 10 years

* 4. Please read the following list of clinical activities, and rank the top three in order of their potential for errors. A ranking of "FIRST" would indicate that the activity has the highest frequency of errors.

An error is defined as an act of commission (doing something wrong) or omission (failing to do the right thing) that leads to an undesirable outcome of significant potential for such an outcome. Errors may or may not cause harm to a patient.

Please rank the TOP THREE ACTIVITIES in order of FREQUENCY OF ERRORS by clicking on one button per column below:

	FIRST	SECOND	THIRD
Evaluation and diagnosis-related activities, such as history and physical, and/or obtaining diagnostic tests and consultations	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Medication-related activities, such as prescribing, dispensing or administering of medications	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Monitoring-related activities, such as follow-up on laboratory or diagnostic studies or close follow-up of acutely or chronically ill children	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Non-surgical procedure-related activities, such as chest tube placement or venipunctures	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Prevention-related activities, such as hand washing, medication reconciliation, or vaccination status	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

* 5. Rank the TOP THREE ACTIVITIES in order of MOST POTENTIAL TO HARM A PATIENT, regardless of frequency, by clicking on one button per column below.

	FIRST	SECOND	THIRD
Evaluation and diagnosis-related activities, such as history and physical, and/or obtaining diagnostic tests and consultations	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Medication-related activities, such as prescribing, dispensing or administering of medications	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Monitoring-related activities, such as follow-up on laboratory or diagnostic studies or close follow-up of acutely or chronically ill children	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Non-surgical procedure-related activities, such as chest tube placement or venipunctures	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Prevention-related activities, such as hand washing, medication reconciliation, or vaccination status	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

Diagnostic Errors in Pediatric Cardiac Intensive Care

* 6. Thinking about a pediatric CVICU similar to yours, please read the following list of breakdowns in the diagnostic process associated with diagnostic errors (delayed, wrong or missed diagnoses), and rank the top three most common in your opinion.

Diagnostic errors are defined as errors that occur when a diagnosis is:

Unintentionally delayed (sufficient information was available earlier but the correct diagnosis was not made until later),

Wrong (another diagnosis was made before the correct one), or,

Missed (no diagnosis was ever made) as judged from the eventual appreciation of more definitive information.

Please rank the TOP THREE most common breakdowns by clicking on one button per column below:

	FIRST	SECOND	THIRD
Failure to gather available medical information through history and physical and/or review of previous charts	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Problems with ordering, performance or interpretation of diagnostic/laboratory tests	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Failure to follow-up on abnormal diagnostic/laboratory test results	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Delays in diagnostic studies related to the severity or complexity of patient's condition or illness	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Delays in intervention related to the severity or complexity of patient's condition or illness	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

Other (please specify)

* 7. The medical literature has classified diagnostic errors (delayed, wrong or missed diagnoses) into different categories.

Please rank the TOP THREE in order of FREQUENCY of occurrence by clicking on one button per column below:

	FIRST	SECOND	THIRD
Cognitive errors as in inadequate data gathering or faulty medical decision-making	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
System-related errors, as in equipment problems, organizational issues (faulty policies/procedures), or problems in communication (hand-offs, care coordination)	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Interplay of cognitive and system-related factors	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
“No-fault” errors such as those involving rare disease or unusual presentations of diseases, or those related to patient/caregiver nonadherence	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

Diagnostic Errors in Pediatric Cardiac Intensive Care

* 8. System-related factors such as a problematic work environment may lead to diagnostic errors.

Please rank the TOP THREE system-related factors in order of FREQUENCY by clicking on one button per column below:

	FIRST	SECOND	THIRD
Inadequate care coordination, teamwork and/or communication across clinical sites or providers.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Personnel issues, such as staffing or training/orientation to work site	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Cultural issues, such as chain of command deficiencies	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Work environment issues, such as inter-personal conflict	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Inadequate supervision of trainees	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Technical problems, such as equipment not available or not working	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Unavailability of subspecialist expertise when needed	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Inadequate information systems to facilitate access to clinical data	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Unavailability of resources such as diagnostic testing due to financial/insurance reasons	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

Other (please specify)

* 9. Please read the following list of cognitive factors that may lead to diagnostic errors (delayed, wrong, or missed diagnoses), and rank the top three factors in order of their frequency of occurrence in your opinion.

Please rank the TOP THREE in order of FREQUENCY by clicking on one button per column below:

	FIRST	SECOND	THIRD
Inadequate data-gathering or work-up, such as incomplete history and physical	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Inadequate data assessment such as failure to pursue a correct diagnosis once an initial (but incorrect) diagnosis has been made	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Inadequate knowledge base	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Inadequate recognition of critical information previously documented in the chart	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

* 10. Medical decision-making may be affected by other factors. Please RANK THE TOP THREE medical decision-making errors in order of frequency by clicking on one button per column below.

	FIRST	SECOND	THIRD
Being misled by advice or anticipated advice from other physicians	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Being too focused on one diagnosis or treatment plan	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Being misled by a normal history and physical, laboratory result or imaging study	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Having an attitude towards the patient either of dislike or of fondness	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Overconfidence about one's own diagnostic ability	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

Other (please specify)

* 11. Please read the following list of miscellaneous factors that may lead to diagnostic errors (delayed, wrong, or missed diagnoses), and rank the top three factors in order of their frequency of occurrence in your opinion.

Please rank the TOP THREE in order of FREQUENCY by clicking on one button per column below:

	FIRST	SECOND	THIRD
Health literacy of the patient/family	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Inexperience of the provider	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Interruptions/pages	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Language barriers	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Parental pressure	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Provider insensitivity to cultural/ethnic differences	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Provider overreliance on memory	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Time/workload issues	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Your emotions such as personal issues affecting your work	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

Other (please specify)

Diagnostic Errors in Pediatric Cardiac Intensive Care

* 12. Please read the following list of conditions that are potentially associated with diagnostic errors (delayed, wrong or missed diagnoses), and rank the top three conditions in order of their frequency of misdiagnosis.

Please rank the TOP THREE in order of FREQUENCY by clicking on one button per column below:

	FIRST	SECOND	THIRD
Medication side effects	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Sepsis	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Endocarditis	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

	FIRST	SECOND	THIRD
Pulmonary hypertension	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Arrhythmia	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Primary heart failure (including cardiomyopathies)	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Pulmonary overcirculation/congestive heart failure (due to aortopulmonary connection(s))	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Pneumothorax	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Pleural/Pericardiac effusion	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Valvar regurgitation or stenosis	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Atrial or ventricular shunts (including baffle leaks)	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Outflow tract obstruction (non-valvar)	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Systemic or pulmonary venous obstruction (including baffle and cavopulmonary anastomosis)	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Circulatory Shock	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Adrenal insufficiency	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Stroke	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Seizure	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Pneumonia	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Psychiatric disorders (including delirium)	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Viral illness diagnosed as a bacterial illness	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

Other (please specify)

* 13. Evaluate the following statements. IN YOUR EXPERIENCE, please select the BEST response to the following possible SEQUELAE as a direct or indirect result of diagnostic errors.

	0-5 occurrences per year	5-10 occurrences per year	10-20 occurrences per year	20-30 occurrences per year	>30 occurrences per year
No Harm (absence of harm with sufficient information to determine)	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
No Detectable Harm (Not able to ascertain harm but harm may exist)	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Minimal Temporary Harm (Harm resulting in no permanent injury and is minimal in severity)	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Minimal Permanent Harm (e.g., scar)	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Moderate Temporary Harm (Harm lasting a limited time only but does not require additional surgery, procedure, or resuscitation measures)	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Severe Temporary Harm (No permanent injury yet causing great discomfort, injury and/or distress (e.g., additional procedure, surgery, resuscitation))	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Moderate Permanent Harm (e.g., chronic renal insufficiency post acute renal failure)	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Severe Permanent Harm (e.g., permanent loss of organ function)	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Death (due to error, not related to the natural or expected course of the patient's condition or illness)	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

* 14. Concerning possible “provider-based” solutions to diagnostic errors (delayed, missed or wrong), please RANK THE TOP THREE in order of LIKELY EFFECTIVENESS by clicking on one button per column below:

	FIRST	SECOND	THIRD
Asking for informal second opinions from same specialty colleagues	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Close follow-up of patients to ensure that the diagnosis is correct (rapid follow-up)	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Empowering patients and families to be vigilant about the possibility of diagnostic errors	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Improving teamwork between all members of the health care team	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Increasing time spent in clinical encounters	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
More training in clinical reasoning skills	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

Other (please specify)

* 15. Concerning system-based solutions, please RANK the TOP THREE in order of LIKELY EFFECTIVENESS by clicking on one button per column below:

	FIRST	SECOND	THIRD
Access to electronic medical records (EMR) which provides comprehensive patient data	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Diagnostic decision support tools: Internet, electronic medical reference texts, electronic decision-support tools	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Establishing a peer review process for randomly selected patient records	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Establishing feedback pathways to communicate changes in diagnoses to previous providers	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Increased access to and availability of consultants and experts	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

Diagnostic Errors in Pediatric Cardiac Intensive Care

* 16. I believe that structural changes in residency/fellowship programs resulting from the 80-hour work week or other ACGME mandates have contributed to an increase in diagnostic errors (delayed, wrong, or missed diagnoses) in pediatrics since 2003.

- Strongly agree
- Agree
- Neutral
- Disagree
- Strongly disagree
- Not applicable

Diagnostic Errors in Pediatric Cardiac Intensive Care

* 17. Did you receive training in NURSING, PHYSICIAN ASSISTANT or MEDICAL SCHOOL on the significance of and factors that may lead to diagnostic errors (delayed, wrong or missed diagnoses)?

Please choose all that apply.

- Yes, in an informal curriculum
- Yes, in a formal curriculum
- No
- I do not remember

* 18. Did you receive training in your CLINICAL CURRICULUM, RESIDENCY or FELLOWSHIP on the significance of and factors that may lead to diagnostic errors (delayed, wrong or missed diagnoses)?

Please choose all that apply.

- Yes, in an informal curriculum
- Yes, in a formal curriculum
- No
- I do not remember

Diagnostic Errors in Pediatric Cardiac Intensive Care

* 19. If you have completed nursing school, physician assistant training, residency and/or fellowship, how many years have you been in practice?

- Not applicable
- Answer in number of years (e.g., 5)

Diagnostic Errors in Pediatric Cardiac Intensive Care

* 20. Please indicate the allocated percentage of TOTAL WORK time you spend in these areas (to total 100%)
