

Supplementary Table S3 – Type & outcome of cardiac arrest with intubation.

| Patients | Type of Arrest | Outcome of Arrest |
|-----------------|-----------------------|--------------------------|
| Patient 1 | Bradycardia | ROSC |
| Patient 2 | Bradycardia | Death |
| Patient 3 | VT/VF | Death |
| Patient 4 | PEA | ROSC |
| Patient 5 | PEA | ROSC |
| Patient 6 | PEA | ROSC |
| Patient 7 | PEA | ROC with ECMO |
| Patient 8 | PEA | ROC with ECMO |
| Patient 9 | PEA | ROSC |
| Patient 10 | Bradycardia | ROC with ECMO |

Ten of 67 patients suffered peri-intubation cardiac arrest. This table shows the type & outcome of each arrest. *VT*, Ventricular tachycardia; *VF* ventricular fibrillation; *PEA*, pulseless electrical activity; *ROSC*, return of spontaneous circulation; *ROC*, return of circulation; *ECMO*, extracorporeal membrane oxygenation.
