

Online Supplement for

Assessing the risk of democratic reversal in the United States: A reply to Kurt Weyland

Matias López
Graduate Institute of Geneva

Juan Pablo Luna
Pontificia Universidad Católica de Chile

Kurt Weyland samples 31 cases and codes them as either members or non-members of six sets, which relate to two overarching concepts: institutional weakness and exogenous conjuncture. The author theorizes that both concepts relate to the fate of democracy, and thus inform the likelihood that democracy in the US will endure or succumb. The author's original data is replicated in Table 1.

Table 1. Cases and Sets

	Institutional Weakness			Exogenous Conjecture			
	High Instability	Paralegal Change	Easy Change	Economic Crises	Security Crises	Hydrocarbon Windfall	Democratic Suffocation
Chávez	1	1	0	1	0	1	1
Morales	1	1	0	0	0	1	1
Correa	1	1	0	0	0	1	1
Moreno	1	1	0	1	0	0	0
Gutierrez	1	1	0	0	0	0	0

Source: Weyland, 2020

Weyland's reduction yields three paths towards democratic suffocation:

Hydrocarbon Windfall \wedge High Instability
Economic Crises \wedge Security Crises \wedge Paralegal Change
Economic Crises \wedge Easy Change

He only makes use of the logical AND (\wedge), dismissing the logical NOT (\neg), and does not appear to base his estimation on a truth table, i.e. considering all possible combinations of set attributes. When we reduce¹ conditions after building a truth table following Ragin's method, Weyland's own data generated paths that are different, and more complex:

$$\begin{aligned}
 & \text{High Instability} \wedge \text{Paralegal Change} \neg \text{Easy Change} \neg \text{Security Crises} \wedge \text{Hydrocarbon Windfall} \\
 \neg & \text{High Instability} \wedge \text{Paralegal Change} \neg \text{Easy Change} \wedge \text{Economic Crises} \wedge \text{Security Crises} \neg \text{Hydrocarbon Windfall} \\
 \neg & \text{High instability} \neg \text{Paralegal Change} \wedge \text{Easy Change} \wedge \text{Economic Crises} \neg \text{Security Crises} \neg \text{Hydrocarbon Windfall}
 \end{aligned}$$

The corrected data can be seen in Table 2.

Table 2. Re-coded Cases and Sets

Institutional Weakness	Exogenous Conjecture				Structural constraints			
	Easy Change (Parliamentary regime)	Economic Crises	Security Crises	Hydrocarbon Windfall	Inequality	Ethnic fractionalization	Traditional values	Democratic Suffocation
Chavez	0	1	0	1	1	1	1	1
Morales	0	0	0	1	1	1	1	1
Correa	0	0	0	1	1	1	1	1
Gutierrez	0	0	0	1	1	1	1	0
Zelaya	0	0	0	0	1	0	1	0
Lugo	0	0	0	0	1	0	1	0
Humala	0	0	0	0	1	1	1	0
N Kirchner	0	1	0	0	1	0	1	0
C Kirchner	0	0	0	0	1	0	1	0
Colom	0	0	0	0	1	1	1	0

Source: Own coding base on Weyland, 2020; Solt, 2016; Inglehart and Welzel, 2005; Dražanová, 2019

Below are the reductions when the outcome set remains identical to Weyland's original.

$\neg \text{Easy Change} \wedge \text{Economic Crises} \wedge \neg \text{Security Crises} \wedge \neg \text{Hydrocarbon Windfall} \wedge \text{High Inequality} \wedge \text{Ethnic fragmentation} \wedge \text{Traditional Values}$

$\text{Easy Change} \wedge \text{Economic Crises} \wedge \neg \text{Security Crises} \wedge \neg \text{Hydrocarbon Windfall} \wedge \text{High Inequality} \wedge \text{Ethnic fragmentation} \wedge \text{Traditional Values}$

$\text{Easy Change} \wedge \text{Economic Crises} \wedge \neg \text{Security Crises} \wedge \neg \text{Hydrocarbon Windfall} \wedge \text{High Inequality} \wedge \neg \text{Ethnic fragmentation} \wedge \neg \text{Traditional Values}$

$\neg \text{Easy Change} \wedge \text{Economic Crises} \wedge \text{Security Crises} \wedge \neg \text{Hydrocarbon Windfall} \wedge \text{High Inequality} \wedge \text{Ethnic fragmentation} \wedge \text{Traditional Values}$

Table 3 discriminates all paths to democratic breakdown and NOT breakdown when implementing each change in isolation, used for the outcomes described in table 1 in the main manuscript.

Table 3: path configurations with each modification

	Configurations (democratic breakdown)	Configurations (\neg democratic breakdown)
