

Supplementary Materials

All figures in this file are **Bland-Altman plots**. The x-axis represents the mean of the NIH Toolbox-CB subtest or composite score (z-score or standard score) and the corresponding legacy subtest or composite score (z-score or standard score). The y-axis represents the difference between the NIH Toolbox-CB subtest or composite score (z-score or standard score) and the corresponding legacy subtest or composite score (z-score). Each dot represents an individual participant. The horizontal black line represents the group mean difference between NIH Toolbox-CB subtest or composite score and the corresponding legacy subtest or composite score. The 2 horizontal red lines represent the upper and lower limits of agreement, or the range within which 95% of the differences between test scores occur. The dotted blue trend line represents the association between the mean scores and difference between scores.
