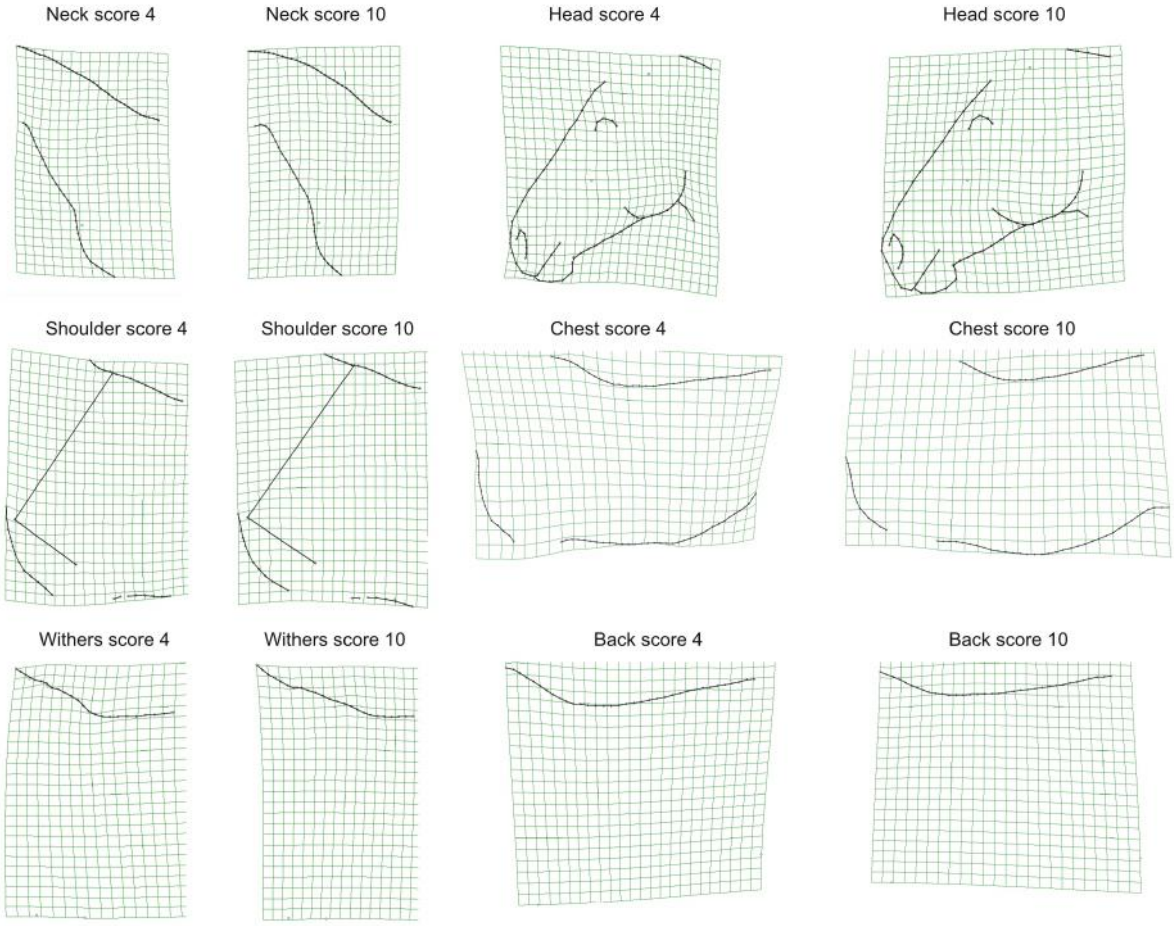
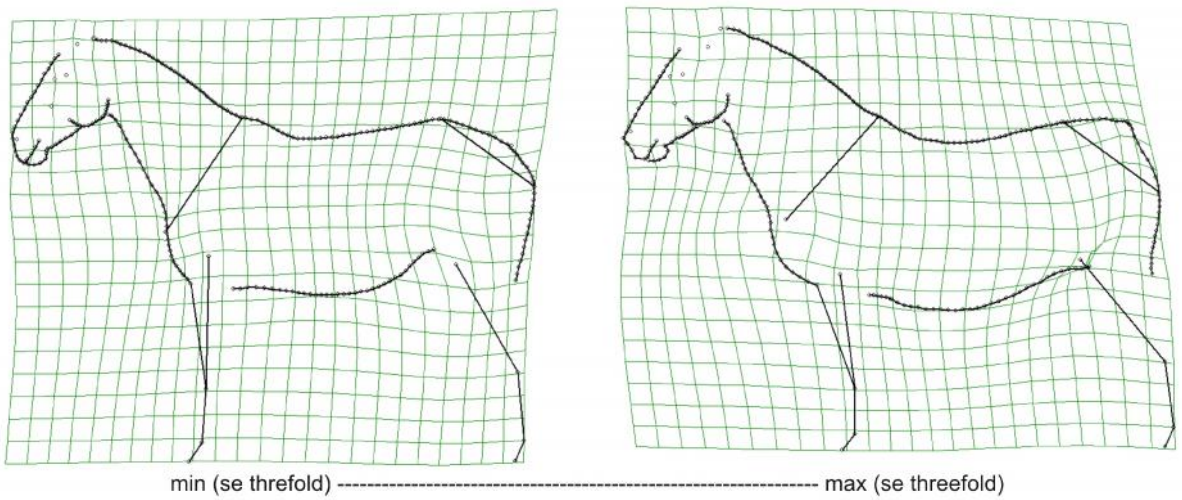
Supplementary Material – for Online Publication Only



Supplementary Figure S1 Shape changes of feature models of head, neck, chest, shoulder, back, withers according to corresponding ratings between a score of 4 to 10.



Supplementary Figure S2 The function of the size variable log of centroid size on shape coordinates. Although the regression of this size variable was not significant, the presented splines show in combination with the type regression in Figure 5 that size is playing an important role in human perception of equine conformation.
