

**Effect of altering ruminal pH by dietary buffer supplementation on
methane emissions from sheep fed forage rape**

X. Z. Sun, R. Harland and D. Pacheco

Animal

Supplementary Figure S1 Daily ruminal pH value of fistulated sheep fed forage rape, with or without Na₂CO₃ supplemented, measured using pH bolus at an interval of 15 min during the CH₄ measurement period of P04. The arrows indicate the feeding time.

Supplementary Table S1 Area (pH x hour) below a certain level of daily ruminal pH value of fistulated sheep (n=4 per treatment for each period) fed forage rape supplemented with sodium carbonate (Na₂CO₃: SC) or unsupplemented control diet (C), measured using pH monitoring boluses.
