

**Nancy C. Gathany, PhD, MEd, Acting Branch Chief, Educational Design, Continuing Education, and Learning Services Branch, Centers for Disease Control and Prevention**

Dr. Gathany is the Acting Chief of the Educational Design, Continuing Education, and Learning Services (EDCELS) Branch in the Division of Scientific Education and Professional Development at CDC. EDCELS is the CDC organizational unit responsible for the CDC Learning Connection (<http://www.cdc.gov/learning>), a web resource providing access to free, high-quality training for the public health community. Dr. Gathany oversees the design, accreditation, and delivery of learning products produced by CDC programs and partners. These products range from fellowship program curricula to innovative technology-based training, such as e-learning and mobile learning.

Since beginning her career at CDC in 1987 as an Instructional Designer, she has designed and developed quality training for public health and health care professionals, beginning with computer-based training and has broadened her focus to include maximizing CDC's use of the web as an instructional tool to meet public health training and continuing education needs. In 1993, she co-created "Investigating an Outbreak: Pharyngitis in Louisiana," an award-winning, computer-based epidemiologic case study designed to teach outbreak investigation skills that is still in demand.

Dr. Gathany received her MEd in instructional technology from the University of Georgia and her PhD in education, with distinction, from Capella University. For her doctoral dissertation, she used a multiple case study design to conduct a qualitative investigation of instructional strategy selection for accessible e-learning.
