

Supplemental Figure 1. Animal distribution from birth to adulthood.

Supplemental Figure 2. Pancreatic glucokinase (GCK) enzyme units and glucagon-like peptide 1 (GLP1) concentration. (A) Pancreatic GCK enzyme units, and (B) GLP1 concentration at 4 weeks post-term in term born (Term; 3M/3F), glucocorticoid induced preterm (G-Prem; 2M/4F), and non-glucocorticoid induced preterm (NG-Prem; 3M/3F) lambs. Data are mean with SEM.

Supplemental Table 1. Primers and Probe sequence for TaqMan gene expression assay based qPCR. The fluorescent reporter dyes (FAM and VIC) are bound to the 5' end of the TaqMan probe. MGBNFQ is the minor-groove binding non-fluorescent quencher present at the 3' end of the TaqMan probe. Tm is the melting temperature. The melting temperatures for primers and probe designed by Applied Biosystem are not available. The base pair of nucleotides for the amplicon is represented by bp.

FAM / VIC = Fluorescent reporter dyes bound to the TaqMan probe, MGBNFQ = Molecular-groove binding non-fluorescence quencher, and bp = Base pairs
