Data are n (%) with p value and partial eta squared (η^2) effect size from univariable logistic regression models. Maternal pre-pregnancy BMI was classified as underweight ($<18.5 \text{ kg/m}^2$), normal weight ($18.5\text{-}24.9 \text{ kg/m}^2$), overweight ($25\text{-}29.9 \text{ kg/m}^2$) or obese ($\geq 30 \text{ kg/m}^2$). m, months.
